

Lablink+

Bi-directional interface for blood monitoring requirements for PrCLOZARIL®

1. INTENDED USE

Lablink+ is a bi-directional interface which allows blood test results to flow electronically between CSAN® and Hospital Information Systems through a secure FTP server in the standard HL7 format.

2. ACCESS RESULTS IN THE CSAN PATIENT CARE PORTAL®

The CSAN Patient Care Portal® is a Canadian web-based, real-time, patient-management tool designed to assist healthcare professionals in the management of treatment-resistant schizophrenia.

CSAN® is the longest-running clozapine hematological monitoring program in Canada. Its range of services helps you manage the risk of agranulocytosis in patients who are taking CLOZARIL® by making sure that regular hematological monitoring is carried out according to the guidelines of the CLOZARIL® Product Monograph.

CSAN® supplies healthcare teams with notification of adverse hematological trends within 24 hours.

3. LABLINK+ KEY BENEFITS

- 16 + years developing and executing this interface technology
- Helps reduce human error and the need to manually enter or fax results
- Efficient use of resources and time
- Same day delivery of critical results to the CSAN Patient Care Portal®

4. IMPLEMENTATION SUPPORT AND MONITORING

CSAN® will assist with implementation:

- I/T documentation and support
- Management of implementation
- Monitoring of Lablink+ functionality daily

Contact CSAN® to support your implementation or for more information at 1-800-267-2726
